DETAILED ACTION

The Amendment filed on 18 December 2006 and RCE filed on 02 March 2007 have been acknowledged.

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 02 March 2007 has been entered.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 3. Claims 1-6 are rejected under 35 U.S.C. 102(e) as being anticipated by Pan et al (US 6,908,179).

Pan et al disclose in Figures 1-3 the following claimed features:

Regarding claims 1 and 5, a printing fluid dispenser (Figure 3, element 300) including:

Application/Control Number: 10/760,261

Art Unit: 2853

-a housing (310) comprising first and second portions (including elements 320 and 335) movable relative to each other;

-a reservoir (315) for storing printing fluid having an outlet arranged to dispense the stored printing fluid to a point external to the housing in response to relative movement of the first and second portions (including elements 320 and 335); and

-a spring (340) connecting the first portion (335) with the reservoir (315), the spring (340) being configured to apply a constrained force on the reservoir in response to said relative movement of the first and second portions so as to cause said dispensing in a controlled manner (column 8, lines 41-63).

Regarding claim 2, wherein the reservoir (315) comprises a deformable container (Abstract) located within the housing (310) and wherein bringing the first and second portions towards each other causes compression of said container via action of said spring (340).

Regarding claim 3, wherein the first and second portions comprise a base and plunger (including elements 320 and 335).

Regarding claims 4 and 6, wherein the first and second portions include locking features (including elements 313 and 325) arranged to prevent disengagement of said portions relative to each other subsequent to said dispensing, the locking features being configured to engage with one another upon said relative movement to dispense the printing fluid and to allow disengagement only upon cooperation with unlocking tool; and the locking features comprise one or more complementary protrusions and indentations

Application/Control Number: 10/760,261 Page 4

Art Unit: 2853

(bellows 325 show the protrusions and indentations formed on both sides of walls) formed into opposing walls of the first and second portions.

Response to Arguments

4. Applicant's arguments with respect to claims 1-5 have been considered but are moot in view of the new ground(s) of rejection. The newly found reference of Pan et al (US 6,908,179) discloses the claimed invention as shown above.

Contact Information

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to An H. Do whose telephone number is 571-272-2143. The examiner can normally be reached on Monday-Friday (Flexible).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Stephen D. Meier can be reached on 571-272-2149. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic

Business Center (EBC) at 866-217-9197 (toll-free).
